Report rationalization worksheet (LIB-51)

Purpose: a worksheet for a reporting or learning operations lead to cut reporting sprawl, with stated criteria so each keep, merge or retire decision can be defended to the report's owner.

Worked example at Tessaly Health, a fictional health system, on an invented report catalog.

Criteria, applied in order (the first that fits decides)

#	Criterion	Decision
1	The catalog already marks it a duplicate	**Retire**; send users to the surviving report
2	No views in 90 days	**Retire** in 30 days unless the owner names a decision it supports
3	Same metric from the same source as another active report	**Merge** into the most-used one, with a view for each audience
4	Row-level extract	**Keep, restrict** to the analyst role; replace with a governed dataset
5	Fewer views than scheduled runs	**Review** with the owner; retire next quarter if unused
6	Otherwise	**Keep**

Any surviving report on compliance, or read by executives, must use the governed metric definition and pass the pre-publication checks.

Worksheet (synthetic)

ID	Report	Views (90 days)	Decision	Reason	Action
RPT-001	Executive Compliance Scorecard	41	Keep	Used, unique	Governed definition and checks
RPT-002	Compliance Scorecard (Legacy)	3	Retire	Duplicate	Users to RPT-001
RPT-003	Overdue Training by Unit	212	Keep, absorbs RPT-004	Same metric and source	Manager view added
RPT-004	Overdue Training by Manager	64	Merge	Same metric and source	Becomes a view of RPT-003
RPT-005	Certification Expiry 60-Day Outlook	180	Keep, absorbs RPT-006	Same metric and source	Lapses view added
RPT-006	Certification Lapses	22	Merge	Same metric and source	Becomes a view of RPT-005
RPT-007	New Hire Onboarding Status	95	Keep, absorbs RPT-008	Same metric and source	HR view added
RPT-008	Onboarding Completion Rates	8	Merge	Same metric and source	Becomes a view of RPT-007
RPT-009	Residency Attendance	30	Keep	Used, unique	
RPT-010	Agency Utilization by Unit	27	Keep, absorbs RPT-011	Same metric and source	Executive spend view added; governed definition and checks
RPT-011	Agency Spend Summary	12	Merge	Same metric and source	Becomes a view of RPT-010

ID	Report	Views (90 days)	Decision	Reason	Action
RPT-012	Agency Hours (Old Format)	1	Retire	Duplicate	Users to RPT-010
RPT-013	Annual Compliance Raw Extract	15	Keep, restrict	Row-level extract	Analyst role only; governed dataset
RPT-014	Course Catalog Inventory	4	Keep	Used, unique	
RPT-015	Elective Course Usage	0	Retire	No views	Owner has 30 days to object
RPT-016	Turnover by Unit	19	Keep, absorbs RPT-017	Same metric and source	First-year view added
RPT-017	First-Year Turnover	9	Merge	Same metric and source	Becomes a view of RPT-016
RPT-018	Time to Proficiency	6	Keep	Used, unique	
RPT-019	Training Hours per FTE	0	Retire	No views	Owner has 30 days to object
RPT-020	LMS Login Activity	2	Review	2 views over 3 monthly runs	Owner confirms use or it retires
RPT-021	Compliance by Job Role	11	Keep	Used, unique	Governed definition and checks
RPT-022	Compliance by Job Role v2	5	Retire	Duplicate	Users to RPT-021

Result: 22 reports become 11, plus 1 under review. Five are retired and five are merged into the reports that absorb them. Four survivors now carry the governed-definition requirement.

The worksheet is generated by `analysis/rationalize.py`. Grouping reports into metric families is a judgment call, so the grouping is written in the script where it can be reviewed and changed.

Why it’s built this way

The criteria are ordered so the cheap, uncontroversial calls (duplicates, unused reports) are made before the ones that need a conversation. Merging keeps every audience’s view but leaves one query behind it, which is the real point: two queries for one metric is how two numbers for one metric happen. Views per scheduled run, rather than raw views, keeps a quarterly report from being judged against a daily one. The 30-day objection window costs little and avoids retiring something a regulator asks for once a year.
